Nature's Antioxidant: 20 Times More Powerful Than Vitamin C Paul Yutsis

It is not just coincidence that since the beginning of time ancient healers, medicine men, and physicians relied on plant sources to keep people alive and in optimum health. Hippocrates (450 B.C.), considered the father of medicine, used gruel as a common remedy for ill health, while today's American Indians still rely on herbs rather than prescription drugs. The uses of plant sources for medicines has been debunked by most modern scientists. They insist that designer prescription drugs, manufactured by pharmaceutical firms, are the most effective way to treat modern-day illnesses. Yet, doctors readily admit that with the exception of antibiotics, prescription drugs don't cure diseases, and some of the diseases they are supposed to cure remain mammoth health problems. For example, one ailment that has more drugs prescribed for it than virtually any other - heart disease - remains the number-one killer of people throughout the world. But thanks to research conducted by French Professor Jacques Masquelier in the 1980s, the most powerful antioxidant known to man - patented by Masquelier as "pycnogenol" - was introduced to the world of natural medicine. This compound has been shown to be 50 times stronger than vitamin E and 20 times more powerful than vitamin C. Unfortunately, most biochemists and pharmacologists continue to ignore Masquelier's discovery, refusing to apply it to modern medicine. They are too steeped in conventional medicine and do not believe that anything - aside from antibiotics and other prescription drugs - fights off microbes. For this reason, many continue to suffer from disabling diseases for which there is no prescription-drug cure.
