Geo-information: Technologies, Applications and the Environment: 5 (Geotechnologies and the Environment) Mathias Lemmens

Geomatics, the handling and processing of information and data about the Earth, is one geoscience discipline that has seen major changes in the last decade, as mapping and observation systems become ever more sensitive and sophisticated. This book is a unique and in-depth survey of the field, which has a central role to play in tackling a host of environmental issues faced by society. Covering all three strands of geomatics - applications, information technology and surveying - the chapters cover the history and background of the subject, the technology employed both to collect and disseminate data, and the varied applications to which geomatics can be put, including urban planning, assessment of biodiversity, disaster management and land administration. Relevant professionals, as well as students in a variety of disciplines such as geography and surveying, will find this book required reading.

This rapidly developing field uses increasingly complex and accurate systems. Today, technology enables us to capture geo-data in full 3D as well as to disseminate it via the Web at the speed of light. We are able to continuously image the world from space at resolutions of up to 50 cm. Airborne LiDAR (laser surveying) sensors can be combined with digital camera technology to produce geometrically correct images of the Earth's surface, while integrating these with large-scale topographic maps and terrestrial as well as aerial images to produce 3D cityscapes that computer users can explore from their desktops.

From reader reviews:

Gina Gregg:

Do you have favorite book? If you have, what is your favorite's book? Reserve is very important thing for us to find out everything in the world. Each publication has different aim or perhaps goal; it means that guide has different type. Some people truly feel enjoy to spend their time to read a book. They can be reading whatever they acquire because their hobby is usually reading a book. Why not the person who don't like studying a book? Sometime, man feel need book after they found difficult problem as well as exercise. Well, probably you will want this Geo-information: Technologies, Applications and the Environment: 5 (Geotechnologies and the Environment).

Virgil Arriola:

The book Geo-information: Technologies, Applications and the Environment: 5 (Geotechnologies and the Environment) can give more knowledge and also the precise product information about everything you want. So why must we leave a very important thing like a book Geo-information: Technologies, Applications and the Environment: 5 (Geotechnologies and the Environment)? A few of you have a different opinion about guide. But one aim which book can give many data for us. It is absolutely suitable. Right now, try to closer using your book. Knowledge or information that you take for that, you are able to give for each other; you may share all of these. Book Geo-information: Technologies, Applications and the Environment: 5 (Geotechnologies and the Environment) has simple shape however, you know: it has great and massive function for you. You can appear the enormous world by open up and read a book. So it is very wonderful.

Pamelia Thompson:

Information is provisions for anyone to get better life, information currently can get by anyone from everywhere. The information can be a expertise or any news even a problem. What people must be consider any time those information which is within the former life are challenging be find than now's taking seriously which one would work to believe or which one typically the resource are convinced. If you receive the unstable resource then you get it as your main information you will see huge disadvantage for you. All those possibilities will not happen in you if you take Geo-information: Technologies, Applications and the Environment: 5 (Geotechnologies and the Environment) as your daily resource information.

Martin Kelley:

Reading a book for being new life style in this calendar year; every people loves to study a book. When you go through a book you can get a lot of benefit. When you read guides, you can improve your knowledge, mainly because book has a lot of information in it. The information that you will get depend on what forms of book that you have read. If you would like get information about your analysis, you can read education books, but if you act like you want to entertain yourself read a fiction books, this sort of us novel, comics, along with soon. The Geo-information: Technologies, Applications and the Environment: 5

(Geotechnologies and the Environment) will give you a new experience in looking at a book.
