# State-of-the-Art in Content-Based Image and Video Retrieval (Computational Imaging and Vision)

## State-of-the-Art in Content-Based Image and Video Retrieval (Computational Imaging and Vision)

Images and video play a crucial role in visual information systems and multimedia. There is an extraordinary number of applications of such systems in entertainment, business, art, engineering, and science. Such applications often involved large image and video collections, and therefore, searching for images and video in large collections is becoming an important operation. Because of the size of such databases, efficiency is crucial. We strongly believe that image and video retrieval need an integrated approach from fields such as image processing, shape processing, perception, database indexing, visualization, and querying, etc. This book contains a selection of results that was presented at the Dagstuhl Seminar on Content-Based Image and Video Retrieval, in December 1999. The purpose of this seminar was to bring together people from the various fields, in order to promote information exchange and interaction among researchers who are interested in various aspects of accessing the content of image and video data. The book provides an overview of the state of the art in content-based image and video retrieval. The topics covered by the chapters are integrated system aspects, as well as techniques from image processing, computer vision, multimedia, databases, graphics, signal processing, and information theory. The book will be of interest to researchers and professionals in the fields of multimedia, visual information (database) systems, computer vision, and information retrieval.

### **From reader reviews:**

#### **Joshua Nichols:**

The reserve with title State-of-the-Art in Content-Based Image and Video Retrieval (Computational Imaging and Vision) possesses a lot of information that you can learn it. You can get a lot of profit after read this book. This book exist new know-how the information that exist in this reserve represented the condition of the world today. That is important to yo7u to understand how the improvement of the world. This specific book will bring you within new era of the the positive effect. You can read the e-book with your smart phone, so you can read this anywhere you want.

#### **Lisa Sullivan:**

Often the book State-of-the-Art in Content-Based Image and Video Retrieval (Computational Imaging and Vision) has a lot info on it. So when you make sure to read this book you can get a lot of advantage. The book was written by the very famous author. This articles author makes some research before write this book. That book very easy to read you can find the point easily after reading this article book.

#### **Johnny Abel:**

This State-of-the-Art in Content-Based Image and Video Retrieval (Computational Imaging and Vision) is fresh way for you who has fascination to look for some information given it relief your hunger of information. Getting deeper you into it getting knowledge more you know or perhaps you who still having little bit of digest in reading this State-of-the-Art in Content-Based Image and Video Retrieval (Computational Imaging and Vision) can be the light food for you personally because the information inside this specific book is easy to get by means of anyone. These books acquire itself in the form which is reachable by anyone, yeah I mean in the e-book application form. People who think that in publication form make them feel tired even dizzy this e-book is the answer. So there isn't any in reading a e-book especially this one. You can find what you are looking for. It should be here for you actually. So , don't miss it! Just read this e-book variety for your better life and knowledge.

#### **Karen Huff:**

Reading a guide make you to get more knowledge from this. You can take knowledge and information originating from a book. Book is written or printed or descriptive from each source in which filled update of news. With this modern era like currently, many ways to get information are available for anyone. From media social similar to newspaper, magazines, science guide, encyclopedia, reference book, new and comic. You can add your understanding by that book. Do you want to spend your spare time to open your book? Or just trying to find the State-of-the-Art in Content-Based Image and Video Retrieval (Computational Imaging and Vision) when you necessary it?
